SUMMARY

Personalization Developer experienced in Salesforce Marketing Cloud Personalization (Interaction Studio), Salesforce Data Cloud, SQL, and customer analytics. Skilled in audience segmentation, behavioral targeting, customer data modeling, and delivering data-driven digital experiences that improve customer engagement.

PROFESSIONAL EXPERIENCE

Jr. Personalization Developer — Axos Bank Sep 2026 – Present

- Improved digital customer targeting effectiveness by developing behavioral audience segments and personalization rules for web experiences, leveraging Salesforce Marketing Cloud Personalization (Interaction Studio) to deliver real-time content and offer recommendations.
- Accelerated personalization use case delivery by translating business requirements into technical solutions and collaborating with marketing, product, and engineering teams through Azure DevOps and Agile workflows.
- Enhanced audience activation capabilities by supporting customer data modeling and segmentation initiatives within Salesforce Data Cloud, enabling more precise targeting and customer engagement strategies.
- Reduced troubleshooting time for personalization initiatives by analyzing campaign configurations, customer attributes, event tracking, and user behavior data to identify root causes and validate experience delivery.

PROJECTS

Sway App Research Project, CSUSM Aug 2025 – Dec 2025

- Improved rehabilitation software validation across **28 participant evaluations** by executing functional and integration test plans, identifying synchronization defects, and coordinating hardware/software verification between Meta Quest, Unity, and Bertec force plate systems.
- Reduced researcher data preparation time by developing Python automation scripts that transformed raw sensor logs into validated Excel reports, improving testing efficiency and supporting repeatable software verification.
- Improved software reliability by identifying and resolving data parsing, synchronization, and stage detection defects through iterative functional testing, regression testing, and documented verification procedures within an Agile-style collaborative development environment.

Customer Churn Prediction and Retention Platform *Technologies: Python, SQL, ML, FastAPI, Streamlit* GitHub

- Improved business reporting efficiency by developing a full-stack analytics platform that automated customer churn prediction and dashboard generation using Python, SQL, FastAPI, and Streamlit.
- Reduced manual data preparation through automated ETL validation workflows that cleaned, verified, and transformed customer datasets before machine learning analysis.
- Increased software reliability by implementing REST APIs, validating application functionality, and performing end-to-end testing of data processing workflows prior to deployment.

EDUCATION

California State University, San Marcos — B.S. Computer Science

Coursework: Machine Learning, Databases, Data Structures, Statistics, Software Engineering, Operating Systems

San Diego Miramar College — A.S.

SKILLS

Personalization & Marketing Technology: Salesforce Marketing Cloud Personalization (Interaction Studio), Salesforce Data Cloud, Audience Segmentation, Behavioral Targeting, Customer Journey Personalization
Programming: Python, Java, C++, SQL, REST APIs, FastAPI, Git
Data & Analytics: SQL Server, Pandas, NumPy, ETL, Data Validation, Reporting, Microsoft Excel
Development Practices: Agile, Scrum, SDLC, Testing, Debugging, Root Cause Analysis, Requirements Gathering
Tools: Azure DevOps, GitHub, VS Code, Streamlit, Figma
